Introducing iRead to the PGCPS Network

Last week, we pushed out version 1.4.14 of iRead to our network, which is designed to address the freezing issues with the application. The update to iRead can be received by students and families remotely in their homes; however, the issue may continue to occur on both iPads and Chromebooks that do not receive the update.

To receive the iRead update, please note the following:

❖ Devices must be on a steady and active WiFi connection for updates to be received.

❖ Devices must have more than 25% of battery life remaining to adequately receive updates.

❖ Older models of iPads and Chromebooks may not be able to receive the update,

➢ in which case an exchange for a newer model may be appropriate if the iRead application is not accessible on the student's device.
